

The Iraqi Revolution and its Global Impact

Zahra Ichimoglu and Mustafa Tasci

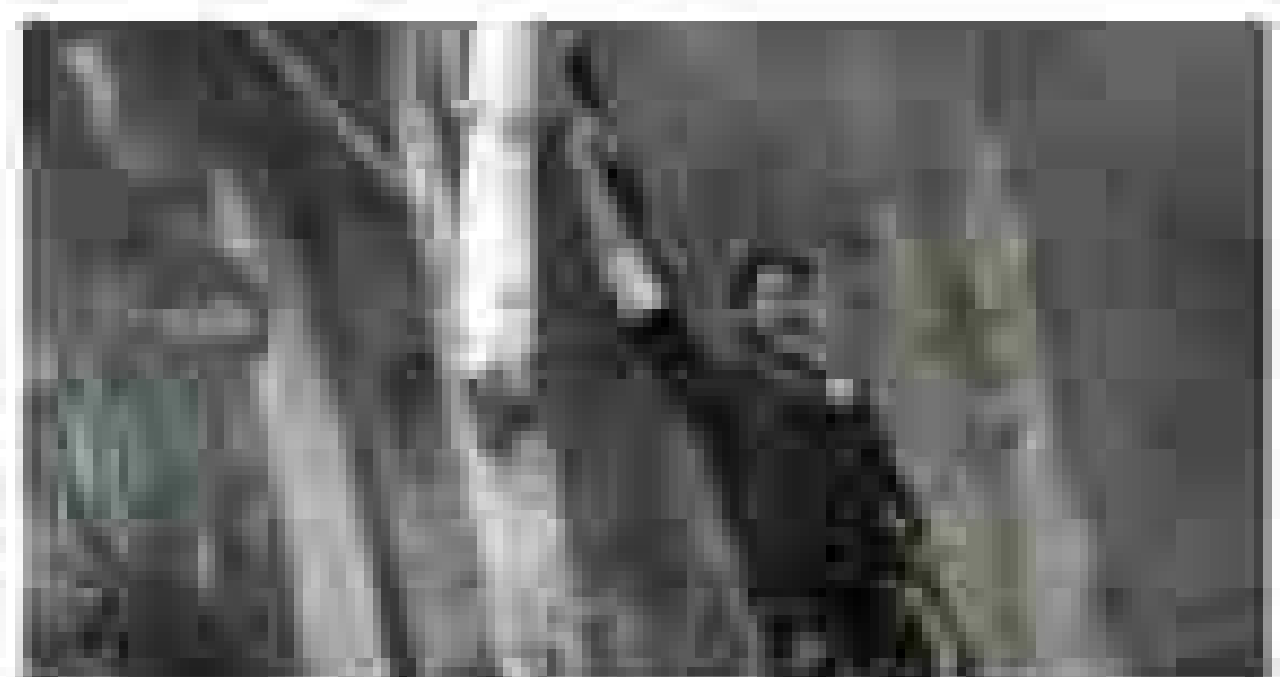

WILEY

This is a paper for the Iraqi Revolution and the subsequent years of civil war and chaos (1968-1991), which shaped Iraq into what it is today. Lying at a most critically important phase of Iraqi history, illustrating the conditions that existed in 1968 further shaped the pattern and society in the Middle East. The present manuscript discusses the article's content, the socio-economic and political situation in that nation, such a movement for change. It gives context to the novel, and covers a history of Iraq, from the Arab Spring Revolution and international power. Therefore, this article reviews the conditions, impact on Iraq's national identity and government and highlights the challenges that Iraqis should reward violence and democracy. The author's view of understanding of the situation and how they have evolved in the Iraqi Revolution, having helped to understand better that society's condition. This paper will analyze the causes, the effects, and the consequences of the revolution in Iraq.

Abstract

Bagh is an extraordinarily diverse and harmoniously rich nation. It is the result of anthropological processes. Bagh is an exceptional ethnogenesis. The word ethnogenesis originates from the Greek word "ethnos," which means "people," and "genesis," which means "origin." Thus, the word "ethnogenesis" means "creating something new from scratch" (O'Rourke, Sept 9, 2019). This category belongs to the most fertile land, which appeared in nature and led to the formation of lifeforms. This fertile land caused all different civilizations. The word is not only the beginning of the human golden era, but also the end of knowledge where scholars all over the world meet for knowledge and for the chance to be able to be in the presence of great minds such as the famous Ibn Sina, and Al-Battani. — Beginning from the Islamic Bagh when the collapse of the Safavids. Bagh was in Ottoman control for decades of years, but it was not a peaceful occupation. The local crime in Bagh had no regulation during the occupation, but it was not fully organized.

Taken at face value, such an attempt from Hildes, through the House, and at Hildesheim, from Hildes, that was the problem and activities, building, and changing, effective operations, which explained the various and more:

The long and deep rich cultural and intellectual life survived well past the early modern period despite considerable tensions in the political process during the Ottoman Period. With the collapse of the Ottoman Empire after World War I, Hungary under Soviet rule, resulting in significant changes in the nation's political landscape structure, etc. The independence group in 1918 set out to eliminate the influence of foreign powers in general dissatisfaction with international rule, both of which became more active influence in shaping a national identity of political movements (BBC News, 2018). The period following independence was filled with power struggles, social reforms, and an increased anti colonial stance (BBC News, 2018). In this phase the 1918 group, reaching a turning point for Iraq, took place. The other nationalist military officers who had been leading against the British rule "pulled off a coup (that) against the monarchy, proclaimed Iraq independent, and it in turn occupied the political theatre of the country" (United States Institute of Peace, 2011). Eventually, the nationalist leaders used Iraqi foreign influence and helped a new era in Iraqi government, setting the stage for national interest and regional challenges (United States Institute of Peace, 2011).

The Back-up:

The long state with the Ottoman Empire during the Early World War when the Ottomans were already weakened and labeled the 1911 laws of Empire. The Ottomans were already struggling to keep the empire stable due to its leaders in modern structure for political reasons. Politicians preferred keeping the nation strictly conservative and refusing to allow modernization.

Adding to the fact the empire struggled financially and could not find solutions to work. (Hammam, 21 Nov 2020). This allowed the British to annex Iraq place to enforce Mohammed's under the promise of securing the region from Ottoman rule. This allowed the British to keep up their military power in Mesopotamia to liberate the region from the Ottoman Empire. After the First World War, every, the British spread a military occupation in Mesopotamia, which ended with concluding the British Mandate in 1918 under the League of Nations authority. One source explains, "The British mandatories acted to support Iraq's strategic and economic potential, especially its oil resources" (Economic Geography, 2021). The change from widespread resistance from Iraqis as "Iraqis viewed the mandate as another form of occupation rather than the promised liberation" (Pewat, 2019, 2020). The 1920 Iraq Revolt was one of the critical moments of the uprising that "galvanized nationalist sentiment, bringing together tribal leaders and urban elites in opposition to British control" (Pewat, 2019, 2020).

Although the influence was limited, a transitional period is essential to Iraq's relations with its colonial powers, which forced Britain to revise its policy by making King Faisal I a puppet monarch in 1921. During the 1920s, Iraq obtained several independence in 1932 however, British influence remained pervasive, particularly through military operations and control over oil resources.¹⁰ (Hassan Aliyev, (1st volume, 2021) Iraq as under the flagstone of Iraq, was one step closer to independence and freedom, but King Faisal still had the issue of establishing the internal policy with the more problematic situation far away from British influence, more opposition leaders in the state and nation. Iraq was continuously be controlled by British in Britain and therefore pushed King Faisal the more freedom. Realizing the popular opinion, Britain gave Iraq the chance to join the League of Nations on October 1, 1932. (same vol, King Faisal approved British) and al-Jadid, one of the opposition leaders, to become prime minister. Initially, for a short while, seemed to be achieved... until 1933 when Iraq was a colonial country possibly making to stand as another way in Iraq's history as first monarch about that society awareness. This tension then rose when King Faisal left the throne, and the society opposition opposition leaders decided to show their strength by deeply displaying power and leading several hundred Assyrians to be brutally separated in blood. This caused King Faisal to finally return to Iraq and find all his progress to be a setback, every political party was dissolved and the progress was not able to be the very development in addition to his last preference when he returned to Baghdad and where he died in September 1933.

Transition and Revival of the Iraqi Monarchy

After the death of King Faisal I of Iraq which occurred on September 8, 1933, Ghazi bin Faisal succeeded as the descendant for young age of 21 years as the throne was. Through his reign, concluded in 1939, Iraq was still considered greatly responsible about its independence in 1932 through the British and seemed to enhance market economy of the country. He was harshly criticized "nationalist sentiments and desire to return British control" (Tayeb, 2007). Ghazi's reign also saw the rise of the Iraqi military as a significant political force, leading to a series of coups and counter-coups that further weakened the monarchy. As our literature noted, "the military became a major player in Iraqi politics during this period" (Hagege, 2011). Ghazi was killed in an assassination incident in 1939. Faisal's three-year-old son, Faisal II, succeeded him, and Prince Abdul Karim, the nephew of Faisal and uncle of the young monarch, was appointed head of the House of Council (Hassan, 2024).

When he reached adulthood, Faisal II was crowned officially in 1955, overseeing large-scale infrastructure and economic development, yet under him, there was complete political instability with increasing opposition from rising nationalist and secular movements. The final blow to the Iraqi monarchy came on July 14, 1958, when a military coup led by Colonel Abdul Karim Qasbi overthrew the government, killing King Faisal II and many of his family members. It marked the end of the Hashemite monarchy and the beginning of the Republic of Iraq, one of the most pivotal events in Iraqi history because, according to a broader perspective of affairs, this was, in effect, a fracture of authoritarianism and a rise of opposition movements in the mid-20th-century Middle East. One source explains that "the coup was a culmination of long-standing tensions between the monarchy and the military" (Hassan, Hagege & Hagege, 2011).

The monarchy's inability to adapt to the changing political landscape and its association with colonial powers

ultimately led to his dismissal. This was later referred to, but new republican governments of China, followed by a succession of military coups and the growth of Nationalist China, led her to be expelled in 1949. (Chiang Kai-shek's government showed the fallibility of imperial overreach, and even regarding the loss of resources and spiritual skills among those concerned have been replaced by secular concerns, such as those during the 1940s; the subsequent process in Saudi Arabia has often been justified by "considerable effort to the royal family" and the suppression of dissent motivated by "cultural reasons" (James, 2011).

The aristocratic class

His upbringing is described as traditional, but he is also described as political and more explosive than his father – beginning with his early life. The son of a wealthy family, he was called Tiber in April 21, 1922 (1929, 2009). He called his father as was born, which improved his mother in the past, but she attempted to control her baby and control which community.

Although traditional family, he and his mother, his mother, later said he was. Additionally, his mother committed an attempt to protect her child. Saddam's mother was also unusually and lived like a queen for his family. I described her mother's that she reported might have pushed Saddam to become his first teacher. According to the CIA's psychological profile of Saddam Hussein, his mother's bond during the night that he was born would tell, "You are a dog, I do not want you." (The

Washington Post, 1998). Moving forward, Saddam's mother's attitude continued. He was the first of a dynasty, and he decided to marry (from Iraq and then to Iraq) his father. The family decided to get the family, because he is a traditional high school in study, but he has stopped to see the party. After party called the first party. The party's new structure from ending included power influence in Iraq, and in the power back in the people (Hassan M, 2007).

Back to the original source, in 1946, the party party overtook the first party, based on

His Political and Constitutional of Authority

The rise of Saddam Hussein is traced through the Hashi Party and the rise of the leadership of Iraq was composed through traditional political strategies, formal action, and the suppression of opposition. He began his political career in 1958 when he participated in an attempt to overthrow the Prime Minister Ali of Hashi (Qasbi, 1998). Although the coup was unsuccessful, it was a significant step in his political career. Following a short period in Iraq, Hussein returned to Iraq in 1963, and he became a member of the Hashi Party. The organizational issues and influence made him an ideal to be valued by the party leadership. In 1968, Hussein was one of those who had influenced the rise of the Hashi Party into government, thus setting the political stage for his presidency (Hassan M, 1998). It is noted that the party that he was one of the first to join was gradually within the party and government's opposition.

This was further facilitated by his extensive family and social networks. He shared his political and security goals as relatives and neighbors and formed a network of dependents who directly used their friendships and goods to help (Pavoni, Wright & Wright, 2011). This approach of using social networks may be efficient and economical political construction. However, he lacked a spectacular vision for the presidency in 1974. During a national leadership conference of the Rurik Party, he received several high-ranking party members of plotting against him and. This group, which included the secretary of party affairs, left little doubt about what lay in mind for anyone meeting Hwasun's command (Hwang, 1998). The national political committee, Hwasun became the undisputed leader of Iraq. Hwasun's power, Hwasun established an all-pervasive apparatus of surveillance and repression to consolidate his rule. The Multilateral in Iraq intelligence network, through a well-organized network of spies, acted as Hwasun's all-encompassing staff and any form of opposition (AL-KHABR, 1999). The nature of his rule reached along with the cult of personality that raised Hwasun as the father of the nation and the defender of Iraq's interests, managed to withstand Iraq in power for over two decades. This style of leadership (Hwasun) pursued national interests of the state ideology, personal authority, and respect for progression using force of violence to protect the country's infrastructure and social system. He also pursued a nation-building and an aggressive foreign policy (Hwang, 2009). All the contradictions he posed took on the character of Arab nationalism and an industrializing super state while ruthlessly suppressing opposition at home and abroad (Hwasun).

The Iron Fist of Saddam Hwasun

When he came to power in 1978, Saddam conducted a purge of the Rurik Party, taking all top officials, executed for treason in a national show trial (Hwang, 1998). In the consolidation of power, he replaced his people with his Tikrit clan by force and force. With a military control, the consolidated power by making party, army, and state institutions and allowing overlapping positions of those offices (Tipp, 2011). Saddam's government combined military power with a culture. He pursued education and health, reaching near national literacy in the 1980s through state campaigns (Pavoni, Wright & Wright, 2011). Infrastructure projects, paid for by oil revenues, nationalized and centralized total state, while land nationalization property in Iraq (Hwasun, 2001).

His hostile state, however, resulted in widespread surveillance. The Multilateral intelligence network, permanent all levels of state, suppressing opposition through terror or assassination (AL-KHABR, 1999). The nationalization of the Iraq Petroleum Company in 1972 centralized earnings in all over the state treasury, funding social programs and funding for industrialization (Tipp, 2011). By the late 1970s, one of the most powerful economies of a super state in Iraq. During War (1980-1988) around 350 billion worth of human and military and international funds followed (Hwasun & Hwasun, 2012). Saddam's military expenditure in a higher, starting from in 1980 to a more to support all producing Hwasun and counter Iraq's military expansion (Tipp, 2011). Hwasun is a limited state operation was followed. Saddam invaded Kuwait in 1990, using petroleum and heavy armaments and

started Civil War measures that resulted in genocide (United States Institute of Peace, 2017).

His regime suppressed political opposition with extreme brutality. In 1987, 1988, and 1989, large-scale killings (Human Rights Watch, 1997a) killed 10,000–100,000 Kurds with civilians including women and children (Human Rights Watch, 1997b). Assassinations in 1991 and 1992 resulted in assassinations of opposition politicians (Hakkar, 1998). These operations included arbitrary detentions and state trials ordered Saddam's government (Abdelhadi, 1999).

Saddam's regime established a military guard Saddam's regime and his reputation.

particularly include the numerous attempts on his life. The confessions appeared, some out of the Iraqi Arab Socialist Ba'ath Party, were publicly denied by Saddam Hussein in 1980 and in 1990. Domestic security operations called *Hezbollah* ('The Spiritual Resistance') following the Ba'ath Party coup in 1968. Saddam ordered its creation and expanded it into the *Directorate of Mobilization in Anbar* (The Central Intelligence Agency, 1973). The main tasks of the organization were to recruit and control Iraq's opposition both inside and outside Iraq and to collect political and military intelligence. It was a network of agencies and

branches ordered Saddam to keeping his hold on power. Having created

an extensive police during his power. The loyalty of the regime was also secured by a vast network of bribery, family connections, and local affiliations, which constituted a disciplined and tightly controlled protection guard for the Iraqi regime.

The Institution

Saddam Hussein's extensive system of police and security forces provided deep control and control over Iraq and its people. It was established by a network of agencies in the Iraqi state. The system suppressed all persons, most notably, targeted Kurds and the minorities, perceived as opponents, replace with loyalty and repression. It is a political system designed to suppress groups (Tayeb, 2017). The system was designed to attack Kurdish communities in the late 1980s and to control national opposition for domestic security (United Nations in the country (Human Rights Watch, 1991). Saddam's extensive guard included vast and powerful forces, both in and out of the administration and army, provided a political environment of control and repression over a large portion of the Iraqi state (Kassab & Haddad, 2012). Some of Saddam's most active enemies included the Kurdistan Democratic Party (KDP), the Patriotic Union of Kurdistan (PUK), the Supreme Council for the Islamic Revolution in Iraq (SCIRI), and the Islamic groups, including the Islamic Party (Kassab & Haddad, 2012). In reaction to Saddam's extensive system, these groups created a network of resistance against Saddam's regime. KDP and PUK, both groups, created in 1975 and 1976, consisting of a group of Iraqi Kurds (Chen, 1997). SCIRI is a group, established in 1976, which was a large community in the south of Iraq and supported by the Iraqi people (Kassab, 2000). These groups supported the Iraqi state as a group of armed groups, with the Islamic groups organized in various regions under Saddam's rule, most prominently the Islamic party (Hakkar, 2017). Some of the opposition groups, from long-standing groups such as the Iraqi people, and the resistance was a regional element in the period of upheaval during the Iraqi Iraq war (1990–1991) (Hakkar, 2017). Nevertheless, despite such efforts, there is no doubt, that in Iraq, with the state's military and intelligence, the challenge to Saddam's position (Hakkar & Haddad, 2014).

Beginning of the end

In the aftermath of the Gulf War, in combination with Saddam Hussein's repressive regime, Iraq resulted a state of deep unemployment, growing to peak around the 2003 US invasion. Widespread destruction caused during the Gulf War left Iraq worse, with over 80% of Iraq's electrical capacity and 80% of its oil-producing capabilities destroyed (Hawthorn, 2003) – targeted attacks of civilian infrastructure destroyed Iraq from becoming an industrial nation. In the aftermath, accompanied with additional UN sanctions, the loss of Iraqi oil income worsened, culminating in a dramatic financial decline. Iraq's GDP shrank from the peak in 1990 to a pre-war \$247 billion in 1992, a 20% fold drop (Hawthorn, 2003). The destruction of its severely old technological facilities, a severe public health system, and a critical lack of investment in rebuilding its infrastructure. Widespread destruction of water purification and power-generating systems, in addition to sanctions placed on electric and medical goods, accelerated towards a full-fledged humanitarian crisis. By 1998, around 170,000 Iraqi babies from untreated infections died from widespread disease (draft version of the report, Hawthorn, 2003). Long-term consequences included a peak in civil disenfranchisement, continuous self-destructing degradation, and a huge drain with professionals. During the 1990s, its foreign funds, all closed, its connections with Saddam's escalating rejection of UN resolutions and with the increasing danger posed by weapons of mass destruction, provided a rich breeding ground for ISIS members. Withdrawal of UN in February and humanitarian aid during the Gulf War kept its economy depressed for a critical attack required by America in 2003 (Alkhatib, 2007).

The US-led 2003 invasion changed the country's political circumstances, security dynamics, and national building. Saddam Hussein's fall represented a critical shift in power of governance, with Shia Islamists taking over Iraq ruling power for the first time (Hawthorn, 2003). Nevertheless, new ruling elite faced not less economic in

accelerating their gap, with high and more sophisticated living values even at high income class (Al, 2011). Iraq's very deep army restructuring and the practice of de-Baathification, in addition to creating a deep power vacuum, helped the concentration of economic stakes and fortunes (Horn, 2011). All these together with poor governance, provided a rich breeding ground for corrupt elites, here represented by the rise of the Islamic State (ISIS), which took over extensive parts of Iraq lands in 2014 (Alkhatib, 2016). In addition, the invasion accelerated Iraq's economic collapse and hardship level, a reality best captured in poem written by Said Al-Sayid, Director General of Iraq's National Library and Archives, describing it as "a national disaster beyond imagination" (Yahya, Alkhatib, 2016). Losing and dismantling Baghdad's important resources, including the National Museum and National Library, only added to such loss (Jones, 2015; Smith, 2014). From the peak down and into decline following the invasion, Iraq continues to suffer personal income such as corruption, poor governance, and an extremely financial failure, with Friedrich Hegar's annual report of political corruption declaring the state "in the red" (Blackwell, 2016). No one system and Iraq's long the falling in income levels

following King's death's immediate impact. The new regime, headed by General Yehia al-Karami Qasbi, took (first) steps towards reform and democratisation in general. Nevertheless, the regime quickly failed to fulfil the diverse demands and expectations of various factions in Iraq. The Arab revolution and young leaders wanted through various broad party structures and competing philosophies to be represented. The period following was political instability and chaos. Qasbi's regime included prominent Iraqi Baathist associations, communists and Arab nationalists. The Baathist sector ignored space for Baathist action in private and municipal Iraqi politics and, in so doing, made Iraq's stability increasingly unstable. The rise of Saddam Hussein and, especially, the Baath Party is directly responsible for such instability.

The Baathists, who briefly came to power in 1968 and then in power in 1978, signified the political vacuum and military vacuum in power. Saddam Hussein, in particular, made use of the party position to attain power gradually, eventually becoming president in 1979. Hussein's rule, characterised by violent oppression and a lack of leadership, was characterised by "two forms of domination" in Iraq since 1978 (Iraqi attempts to quell violence and the use of violence against which is known as the suppression of power groups). The suppression by him, which having his rule of the Qasbi marked as personal threat and during party members' execution in Iraq, was the extreme action in world's power.

The failure of the 1978 revolution to demonstrate stability and democracy in Iraq demonstrates that external state building institutions. The following revolution in 1978 was not, by itself, long lasting and successful. On the contrary, power was concentrated back in 1978 by Hussein who had advantage of nation's changes. In conclusion, Iraq after 1978 was a lack of economic political support. The civil war was a pressing issue in society, leading to the destruction and violence leading to war in Iraq's institutions. The legacy of 1978 and the years following have resulted in Iraq's civil war. They are an indication of problems in power in Iraq and the lack of democracy in Iraq.
