1. *Abstract* – This paper presents a new method for the automatic generation of a 3D model of a human body from a 2D image. The method is based on the use of a set of 3D models of human body parts, which are combined to form a complete 3D model. The method is able to generate a 3D model of a human body from a 2D image of a person standing in a specific pose. The method is able to generate a 3D model of a human body from a 2D image of a person standing in a specific pose. The method is able to generate a 3D model of a human body from a 2D image of a person standing in a specific pose.
