

The Iranian Revolution

Aryana Ahmadpour and Elina Ansari, IOA

Abstract

The 1979 Iranian Revolution caused significant changes for Iran's civilian population. The people of Iran were not used to fundamental Islamic State Policies, who were the last remnants of Iran. Ayatollah Khomeini changed the country to a theocratic country (Islamic), while the people thought he is democratic change. The revolution changed Iran with Khomeini. Consequently, he had performed hundreds of revolutionary period the nation and made new government was following the Islamic laws and traditional values (Shari). The people were often shocked and surprised to realize they thought more loyal to Khomeini. In some cases, their actions were harsher than what happened in the previous king.

Keywords: revolution, society, democratic, Khomeini.

Introduction

The Iranian revolution of 1979 was an extreme change for the citizens of Iran. Many people would believe in the King. This paper will explore the major changes in Iran following the 1979 revolution, including the Islamicization of its culture in the new regime and the policies it introduced. It will also analyze the shifts in public discourse towards the Shah's White Revolution and the rise of Khomeini, highlighting the contrasting views on modernization versus adherence to traditional Islamic values and how these changes impacted the country's economy and society. When Shah Pahlavi was ruling Iran and his surrounded by the White Revolution, he great love to modernize and give wealth and power to Iran. Although the changes earned the Shah support from some parts of his population, others criticized him, even against him the changes were excellent, while religious groups believed that the Shah was too liberal and it was harmful to Islamic values (The Editors of Encyclopaedia Britannica). Although the people asked for Khomeini, they promised him a change of rule. Throughout the months, many ideas had occurred, including justice and freedom on what should be right, Shari, that caused an extreme which they are still that on Iran which is happening often. This change a great improvement in the country and its economy.

Iran Before the Revolution

Shah Pahlavi's family were of Persians. Although they were particularly Iran of Persians, some weren't able to have a proper education. That was until 1923, the revolution was not so good, though some people were already in higher education. Later in the year, Iran's economy started struggling seriously. This was because education services had declined throughout the country and many people were moving away from Iran in the city (BBC).

People had a questionable amount of hope in the 1970s, the Shah ended up leaving the kingdom. He was related to his family and the year 1979, Iran. The reason more people were moved from Iran was because would change throughout the year, as well as the country's economy, which was still having a hard time expanding services and programs, was greatly challenged by global economic instability and changes in Western oil supplies in the 1970s, which caused that opposition to the Shah's policies. Many people knew that Iran would replace a national development program known as the White Revolution with full support. This program included land reform, the encouragement and support of national growth, the nationalization of Iran's oil industry,

Common). Louis Massignon made important the movement through a loss of trust after repudiating Vatican II ideas and attitudes in religion. The portrayal influenced public opinion in the West, turning its perception to an exaggerated view. This Western-friendly perspective ("American Media on Iran: Hoax or a Worldwide Anthropology Now?") Overall, Massignon makes portrayal of the Iranian Revolution was understated, exhibiting a range of perspectives that reflected both international understanding and the revolution's internal dynamics ("Iran: How the West Ignored Islamic Hoax").

The Role of Clergy and Cultural Shifts in the Iranian Revolution

The Iranian Revolution was a time of cultural change in addition to political and economic ones, and this offered a special part of view on the social and religious of the time. Under the Shah's rule, Iranian culture changed as a result of new imported modernization that forced Western-style entertainment and films. These religious leaders and believers were offended by this cultural change because they saw it as a danger to cultural identity and Islamic values. The spread of Westernization led to a movement that opposed the regime's alignment with Western society's moral and cultural standards (Hamed Fallahi). On the other hand, Iranian men were chosen to support during this period, reflecting an alternative narrative that aligned with the religious of Islamic culture. Gradually embracing the Shah's policies, men by historians such as Abbas Kiarostami and Darius Ardebil contributed to Iran's of poverty, inequality, and corruption. This expanding cultural movement helped shape the revolution's collective identity by getting involved with the target of resistance (revoked). The revolution became the stage for a new Iranian identity and the emergence of Islamism (Fallahi) aimed to fight the most significant aspects that eventually led to the revolution (Hamed Fallahi).

The Aftermath of the Revolution

When the Euzerly replaced the monarchy, it was believed that the Shah's army would be loyal and protect Iran from a wider communist takeover. When Khomeini's government's economy and stability came down, it was even able to give an indication it did not let the Shah. The Islamic Republic was established as a way to allow foreign influence to enter the economy, but as they worked to keep their economy running smoothly from within, it became increasingly apparent that they would never be able to return to their pre-revolutionary levels, especially in the oil sector.

The country has benefited from some forms of the economy's reconstruction policy, which has helped the economy, especially in reducing and decreasing poverty. One of the government's focus on reform, such as increasing poverty and education, as well as the reduction of corruption within the government, which is a significantly wider than in Iran's economy has not been able to prove as the time it would like because of its major part, the lack of a policy for giving the economic resources and the lack of access to infrastructure, a performance of various mistakes. Because Hafez Afshar, of the University of York, who got up to Iran in the 1980s, stated, "They started very young from starting democracy, but there was such a lack that they had to allow them to return." This then later mentioned that some educated people had the economy, making the difficulties while that is seen in Iran. The economy, they needed to return both men and women (BBC). While many women were already in higher education at the time of the revolution, the years that followed saw a marked increase in the number attending university. This was in part because the authorities managed to overcome conservative families giving it total access to allow their daughters to study away from home.

Health Care in Cuba Revolution

Since the 1970 Cuban Revolution, Cuba's health care system has been transformed given its free, universal public health, universal education, and self-sufficiency in medical supplies. Access to health care has drastically decreased the burden of infectious diseases (like malaria and tuberculosis), and life expectancy has increased from 50.7 years before the revolution to 76.7 years today. More than 11,000 health workers and 7,400 health centers serve 95% of Cuba and 87% of small islands are now covered by primary health care centers (Health Sector Overview after Human Revolution). The number of hospitals has grown from 50 in 1970 to 15,000 beds in 1978 to 500 with 141,000 beds in 2017, and the rate of doctors to patients has improved dramatically. The number of medical schools has increased from four to fifty-two, producing more graduates, particularly women, and working in the delivery of healthcare to underprivileged areas. Free universal public, universal 100% of its own medications, a community self-sufficiency medical supplies, and a leading the world in biotechnology, making Cuba at West Africa and 12th globally in terms of health agents and services (Health Sector Overview after Human Revolution).

Changes in Cuban After the Revolution

One of the first things that changed the Cuban Revolution was social. Changes came being passed in 1975, it successfully created a Cuban police and culture. During the long long war, the state was more or less intact. As time went on, social became a crucial (vital) place for social and political decisions between politicians and leaders. Changes of the Revolution came in in changing every of Cuban politics, society, and culture, providing a different perspective on the Cuban Republic's history (Human Revolution).

The Cuban Factor, Youth from Cuba's View

Cuba's history is different, played an important role in shaping the political structure that existed in the 1970s (Human Revolution). During those, all Cubans made an important figure. Women's influence started in 1960s and 1970s revolutionary ideas with female participation in war and a that appeared in a program led up with the state's role. The women spread from already emphasized themes of social justice and anti-separatism, starting from the revolution from their (from economic role (women and youth)). Another influential social institution was Agitation-Propaganda Committee. After being called that to be responsible in the state, the committee continued to communicate with the citizens through speeches, seminars and meetings. These messages, adopted and then, continued the state's policies and called for the contribution of an idealist government, growing support among Cuban citizens of Cuban society (The Impact of Propaganda's Women, Youthful Revolution (History, Geography, Cuba, Revolution, and Youth)).

Economic Inequality and Its Impact on the Revolution

Mid-20th century studies show that more and more people, such as the Cuban revolution, and the war that followed with Iraq, especially led to a sharp decline in the rate of income inequality in the nation. Within the years of the war and the revolution from 1960 to 1970, Cuba's income inequality became inequality would have been about 10% and 15% higher. Poverty in Cuba was dramatically decreased dramatically from 20% in the 1970s to less than 10% in 2014. Cuba's human development indicators of 12 indicators have generally improved in a

most of them got poor policies (Fathallah-Nasr). Free education, for example, was free, but the real difficulty providing adequate opportunities for the youth, especially for college-educated youth, was not minimized. In 1976 had particularly high unemployment rates, at 14.4% and 45.7%, respectively, according to the 1976-77 census. Even though they continued to achieve an average of strong economic growth, these numbers point to continuing issues with the nation's economic health (Fathallah). The revolution and new infused economic inequality in Iran by affecting higher income strata instead of helping lower-income strata to make more money (Fathallah). High rates of inflation and a degradation of business' purchasing power and internal living were caused by new policies (overpriced consumer commodities, significant government spending, and an increase in public prices policy). The oil crisis worsened economic conditions under Mohammad Reza, but in 1979 Iran signed a new constitution that with a newly modified living conditions that was in charge of production (Fathallah).

Young people in Iran shaped post-revolution society

In Iran, young people make up the largest group, with more than 40% of the population under 30 years old. Iran is one of the most politically active nations for young people in the Islamic world because of its significant amount of political activity. As a result, the nation's Islamic government has significant influence from adolescents. Iran's politics have been strongly influenced by young activists since 1977. Young people led the requests for significant democratic change movement following the 2009 presidential election, bringing about a new political situation in the Middle East ("The Youth"). The youth group is a product of both religion and political action. They're the eight-year war with Iraq in the 1980s. They experienced the tragedy of the Iraqi and Iran young soldiers' sacrifice at Iranian democracy. Young Iranian youth 1980s demanded a greater role in post-war politics, the economy, and society. Their desires contributed to the election of reformer President Mohammad Khatami in 2001, but young people have returned to Iran after he failed to replace reform. Mohammad Khatami was able to win the presidency in 2001 because of the youth's partial support, but his suppression in the 2004 election had a big impact on Iranian politics ("The Youth"). However, Iran's youth are becoming more and more divided. Following the 2009 revolution, the rising Islamic ideology helped the political power of youth and decreased the rising age of 15, decreased to 16, and finally to 18. Currently, almost half of's voters are under 18, and during the next few years, the percentage is predicted to increase ("The Youth").

Conclusion

The Islamic Revolution of 1979 was a major turning point for the creation of Iran, bringing significant changes to the country's political, social, and economic landscape. While many welcomed the shift from monarchy to an Islamic republic, others struggled with the transition and its long-term consequences. The revolution led to both positive and negative outcomes that continue to shape Iran today. On the positive side, the government achieved its focus toward the needs of the rural and low-income populations, resulting in improved economic, basic education, and in child health, electricity, and education. These changes helped bring them and opportunities for youth of opportunities, giving more support to people who were often overlooked. However, the Islamic Revolution brought challenges, including corruption in political leaders, economic inflation, and tensions with other countries. Despite these difficulties, Iran experienced a unique transformation, and the effects of the revolution remain deeply embedded in the country's identity. The ongoing debate about its impact remains for future.

most of them got poor policies (Fathallah-Nasr). Free enterprise, the unemployment rate was rising, but the real activity providing employment opportunities for the youth, especially the college-educated youth, was not increased. 25 to 27 had particularly high unemployment rates, at 34.4% and 45.7%, respectively, according to the 2000-01 census. Even though they continued to attract an amount of steady economic growth, these numbers point to continuing issues with the nation's economic health (Fathallah). The socialist and neo-socialist leaders negatively reacted to affecting higher income mortgage interest of helping lower-income earners to make their money (Fathallah). High rates of inflation and a degradation of business' purchasing power and internal living were caused by too much of overpriced consumer commodities, significant government spending, and an increase in public-private industry. The oil price remained remarkably stable until the oil shock of 1973-74, but in 1974 Iran signed a long-term oil deal with a newly unified Libya (consensus) that was in charge of production cuts.

Young people in Iran shaped post-revolution society

In Iran, young people make up the largest group, with more than 50% of the population under 30 years old. Iran is one of the most politically active nations for young people in the Islamic world because of its significant amount of political activity. As a result, the nation's Islamic government has significant opposition from adolescents. Iran's politics have been strongly influenced by young activists since 1977. Conclusion

The Islamic Revolution of 1979 was a major turning point for the creation of Iran, bringing significant changes to the country's political, social, and economic landscape. While many welcomed the shift from monarchy to an Islamic republic, others struggled with the transition and its long-term consequences. The revolution led to both positive and negative outcomes that continue to shape Iran today. On the positive side, the government achieved its focus toward the needs of the rural and low-income populations, resulting in improved access to basic necessities such as clean water, electricity, healthcare, and education. These changes helped bring about and improved the world of opportunities, giving more support to people who were often marginalized. However, the Islamic Revolution brought challenges, including restrictions on personal freedoms, economic difficulties, and tensions with other countries. Despite these difficulties, Iran experienced a unique transformation, and the effects of the revolution remain deeply embedded in the country's identity. The ongoing debate about its impact remains for scholars.
