Figure 2. Comparison of the 100% and 50% confidence intervals for the estimated probability of having a positive result by either of 2 methods when the true probability of a positive result is 0.5. The 100% confidence interval is shown in solid black, and the 50% confidence interval is shown in solid gray. The 100% confidence interval is wider than the 50% confidence interval, and the 100% confidence interval is wider than the 50% confidence interval.
