

Chemical Change

Chemical Change

Chemical change is a process in which the substance's chemical composition is altered. This is often accompanied by a change in color, odor, or state of matter. Examples of chemical changes include burning, rusting, and digestion.

Chemical Change

Chemical Change

Chemical change is a process in which the substance's chemical composition is altered. This is often accompanied by a change in color, odor, or state of matter. Examples of chemical changes include burning, rusting, and digestion. Chemical changes are often irreversible, meaning that the original substance cannot be recovered. For example, once a piece of wood is burned, it cannot be turned back into wood.

Chemical changes are often accompanied by the release or absorption of energy. For example, the combustion of gasoline releases energy in the form of heat and light. Conversely, the process of photosynthesis absorbs energy from the sun.

Chemical changes are often accompanied by the formation of new substances. For example, when iron and oxygen combine, they form rust. Similarly, when hydrogen and oxygen combine, they form water.

Chemical changes are often accompanied by a change in the substance's physical properties. For example, when a substance is heated, it may change from a solid to a liquid or from a liquid to a gas.

Chemical changes are often accompanied by a change in the substance's chemical properties. For example, when a substance is heated, it may become more reactive or more stable. Similarly, when a substance is dissolved in water, it may become more soluble or less soluble.

Chemical changes are often accompanied by a change in the substance's color, odor, or state of matter. For example, when a substance is heated, it may change from a solid to a liquid or from a liquid to a gas.

Chemical changes are often accompanied by a change in the substance's chemical composition. For example, when a substance is heated, it may become more reactive or more stable. Similarly, when a substance is dissolved in water, it may become more soluble or less soluble.
