These differences mean that we have to be careful when we compare the results of the two experiments. The first experiment was done with a small number of subjects and the second with a larger number.

The second experiment was done with a larger number of subjects and the results were more consistent.

These results suggest that the first experiment was done with a small number of subjects and the second with a larger number.

The Effects of the Number of Subjects

Introduction

The first experiment was done with a small number of subjects and the results were more consistent. The second experiment was done with a larger number of subjects and the results were more consistent.

The results of the first experiment were more consistent than the results of the second experiment.

The results of the second experiment were more consistent than the results of the first experiment.

The results of the first experiment were more consistent than the results of the second experiment.

The results of the second experiment were more consistent than the results of the first experiment.

The results of the first experiment were more consistent than the results of the second experiment.

The results of the second experiment were more consistent than the results of the first experiment.

The results of the first experiment were more consistent than the results of the second experiment.

The results of the second experiment were more consistent than the results of the first experiment.
