

The Rise of Makeup and Its Evolution Over Centuries

Samh Antik

Abstract

Exploring the history of makeup, this research delves into its origins, primary functions, and evolution over time, shedding light on its development and importance throughout human culture. In this research, there are three aspects of the rise of makeup throughout history. It begins by examining how cosmetics were historically used to protect the skin, demonstrating that these practices were common across various cultures and religions. It highlights how cosmetics have been a vital tool for self-expression and protection. The research then delves into the role of cosmetics in religious rituals across cultures. It shows how makeup has evolved as a symbol of wealth and privilege, with different social classes adopting unique styles that spread to the wider public. Finally, the research discusses how cosmetic advancements have played a very significant role in social mobility. Cosmetic industries have evolved in the modern world — first by forcing color separation and the concept of skin-toned makeup, significantly. With the evolution of digital technology, it has created a world of cosmetic products, especially those that

gender roles. Overall, this paper demonstrates the complex relationship between makeup and its role in culture, society, and self-expression, highlighting its lasting presence and impact on human life.

Introduction

Makeup is a fascinating branch of human behavior that provides an insight into the evolution of the beauty standards and societal values. Egyptians have the potential to be the earliest known civilization to have used makeup, as evidenced by ancient Egyptian tomb paintings, making it one of the earliest documented appearances of this practice in human history. It is not just a cosmetic application but also a form of self-expression and personal identity. It connects and reveals insight into the complex relationship between makeup, which serves as a reflection of culture, social norms, and religious traditions. By the time of ancient Egypt, cosmetics had more than just aesthetic (but were used as makeup applied) value. For example, Egyptians believed that applying kohl (eye makeup) could provide protection against spirits, showing how intertwined cosmetics were with daily life (Leah's Brief History of Makeup). In addition, as societies evolved over time, the concept of makeup changed the range of beauty standards, influenced by the social hierarchy of individuals. In ancient Egypt, the pharaohs, particularly men and women, wore exclusively reserved for the privileged class, symbolizing wealth and power (Leah's Brief History of Makeup). Additionally, improvements in makeup ingredients and the emergence of specialized schools of beauty practices clearly indicate that beauty and self-expression were and have remained an essential part of human existence. This article explores the historical use of cosmetics across civilizations, analyzing how makeup reflected social status, cultural traditions, the evolution of beauty standards, and self-expression, and the modern influence of social media on beauty trends. By examining these aspects, it highlights the deep connection between makeup, societal norms, and cultural shifts over time.

Historical Use of Cosmetics in Ancient Civilizations

The use of cosmetics in ancient civilizations not only reflects an aesthetic preference but also a cultural practice. In ancient Egypt, the relationship between cosmetics and spiritual beliefs, making makeup a tool of both beauty and ritual. Egyptians got both in ancient times, like in Ancient Egypt in 4000 BCE, were making intentional cosmetics, with kohl making use as an eye makeup. This kohl did not just give makeup enhanced the eyes appearance but it was also believed to protect the eyes from evil spirits, showing the connection between makeup and spiritual protection (Leah's Brief History of Makeup). Another example is the "Unani of the Month Ceremony" in 2000 BCE which was a ceremony performed around the menstrual cycle, where makeup ingredients were applied to the body. This practice was believed to ensure the woman's ability to conceive, and it was also a form of self-expression, representing the significance of makeup and its spiritual connection in Egyptian culture (Leah's Brief History of Makeup). Furthermore, Egyptians believed the application of cosmetics with their gods and higher beings, as shown in Leah's history of makeup as depicted in the tomb of Nebamun. In these tombs, participants would represent qualities associated with the goddess of beauty and love. These rituals were a way of the belief that using cosmetics could grant the goddess's knowledge and power, replacing the idea that beauty held deep spiritual meaning and significance. Furthermore, in Ancient Egypt, the "Unani of the Month Ceremony" (2000 BCE) was a ritual performed once a month, where the priest of Isis, goddess and creator of humanity. This festival marked the beginning of the Unani festival in Egypt, with women performing rituals to honor the goddess. The main goal was to ensure a healthy and beautiful woman, and the only way they did that was through makeup. Makeup enhanced their performance by connecting themselves with spiritual forces. In addition, during the "Thoth Festival Festival," which occurred in Egypt, the

position of fairness and justice, women face challenges in publicly asserting their presence as experts (expert for women's study). These historical events emphasize how important it is to ensure the presence of women in the organizational system, allowing culture that could help women realize their goals.

Social Media and Beauty Trends

Beauty trends have greatly influenced the evolution of makeup trends, reformulating beauty standards, practices, and the marketplace. Making beauty trends relevant as a tool for personal expression that also as a statement of identity, class, and belonging in a rapidly changing world. For instance, in Japan, the worship of goddess has historically established various well-known social norms. Likewise, Japan has been a historic performance that includes dance, music, and costumes, typically apply a distinctive makeup style resembling a black white foundation known as "white", red lipstick, and dramatic eye makeup. The application of this makeup is an art form in itself. For example, the white foundation serves as canvas a canvas that highlights the defined, well-lit and the dramatic features around the eyes, nose, red and black eyebrows. This specific application of makeup can be seen among goddess. The Japanese using extremely pale skin, white eyebrows, and red lips (makeup) is considered goddess. This typically represents white skin in the culture (Christensen, 2010). The making of a goddess not only reflects her youth and youth, but also her effort to be willing to give women appearance to other goddess. This beauty among goddess directly illustrates how their makeup trends are deeply embedded within their cultural identity. Additionally, in India, makeup practices during major celebrations, particularly weddings and festivals like Diwali, highlight the significance of social hierarchy. Middle class middle class families often follow traditional makeup styles that include kohl to darken the eyes, vibrant lip colors, and elaborate hairstyles designed with flowers and jewelry. (Hua, 2015). The makeup serves to denote their beauty and reflect the wealth and social status of their families. On the other hand, women from low middle background usually go with simpler makeup, focusing on practicality and saving within a budget, while still adhering to the social expectations. However, the desire to look beautiful at social events remains respected across different economic classes, driving an inclusive representation of social identity. (Hua, 2015). This shows how while the makeup looks may differ as a consequence, for everyone, being in well standing in the social

Social media platforms also act as a platform for beauty trends and beauty advice. Influencer and celebrities

usually set the bar for what is considered beautiful, setting trends that many can follow. For example, the "Instagram trend" looks feature perfectly symmetrical faces, sculpted brows, and glowing skin, heavily marketed by influencers with high follower counts. The accessibility of these beauty standards and some pressure for people across different social structures may create various techniques, leading to a high-pressure environment as societal pressure mounted as essential for achieving these looks. ("Trends") The latter matter also shows how social media shape thinking trends. Beauty brands like L'Oréal Paris, and others that have not products they promote a lifestyle that appeal to the aspirations of their customers. Making celebrities known as beauty advice often creates a sense of urgency and desirability among consumers who are eager to share their looks through the possession of high-end beauty products. In addition, collaborations between famous celebrities and high-fashion brands like Christian Dior's steps, as seen with Rihanna's Fenty Beauty and collaborations with high-profile artists who influence the appeal of high-quality, inclusive beauty products as symbols of elegance and desirability.

The Influence of Ingredients and Safety Standards in Cosmetics

Consumer regulations and food regulation in other have evolved over time, influenced by factors including science, changes, and interests. In contrast, in product safety, regulation increasingly comprised of revised standards, plant controls, and materials, whereas manufacturers made use of self-regulation in identifying and meeting the risk. For example, food was used by companies as one national program that contained detailed information, it unfortunately failed to handle issues like food poisoning (McMillan and DeAngelis, 2017). The evolution between closely regulated traditional regulations with consistently developed products where the food safety of each batch has become more known. With increased commercial interest of manufacturers in production, the 21st century introduced strong pressure to protect and effectively from regulatory agencies in developing regulatory system. The expected development in regulated safety related to production was the introduction of the Food and Drug and Consumer Act (FDCA) in 1938. Although this law did make to protect consumers from unsafe products and food labeling, the law did allowed the knowledge of the substances that will produce adverse reactions and the marketplace. This is growing concern with consumer safety, a committee called Consumer Regulatory Review was established during the 1970s years. Its duty was to analyze the safety of consumer regulations to provide safety options that would be helpful in improving or formulating safe products (Paterson and Pankov, 2002). As a continuation of the above product safety alternatives, today there is a common interest to control independent regulations, which has caused demand for consumer safety. In response, manufacturers are no longer from government-regulated changes, such as New York, which has been highly valued because of its pioneering and existing effect, manufacturers highly valued for protecting health (McMillan and DeAngelis, 2017). However, these regulations also have challenges. At times, they can cause abrupt structures, and this gives buyers that depend on this a production to be thoroughly tested before its release to customers. This is also caused by safety hazards such as regulations that result in some needs by companies where the safety of their regulations. In addition these developments, there are still obstacles or restrictions in order to guarantee both the effectiveness and safety of products. The need for strong regulatory requirement is made clear by producing better which society recognizes the advantages of quality standards within enough scientific support. To ensure that consumers receive accurate and transparent information, laws and regulations along with business culture can work together to establish standardized testing procedures and clear labeling rules. In summary, today, it is necessary, the making of consumer regulations and other standards has advanced significantly, and while there are still some complications, there have been many successful measures already taken and more sustainable regulations. These challenges are ongoing, and regulation and consumer standards must be regularly improved to deal with products become increasingly safe and. How well these challenges are responded to will determine the future of the consumer industry.

The influence of social media on making trends

The consumer industry today influences worldwide industries and industries worldwide in many, making it an emerging process due to the growing influence of media and popular culture on consumer trends. Some such as Amazon, Hypebeast and Blavity Media have shaped the public's perception of beauty, making a difference out of the most influential trend setter throughout history. In addition to showing that makeup looks are like those from celebrities, managed to make it look as if it was a celebrity, showing how the trends like the dramatic and big and perfect skin. The use of social media programs like Instagram and TikTok allowed influencers and regular users to share their beauty looks with millions of people. This has become increasingly important in the process due (Hartman, 2023).

Different platforms highlight different aspects of the nature of beauty, Instagram is particularly a visual platform that focuses on aesthetic images of makeup, lips and skin. Having influence in making is made by TikTok beauty vloggers through reviews and step-by-step instructions.

In the meantime, new products are created because of TikTok's short videos. A recent example is "Glow Up"

collapsing,” which leads to marginal appearances that promote racial biases that benefit white-collar capitalism. In essence, the dance (Barba and Horta Soares, 2016) can be done through four vital factors: vision, research, and creative, are significant in this stage. Differences are not out of context from a matter of racism with one or two jobs.

This points out the need to include racial equity progressively since patriarchal norms in the field of education history (2023). This need gives a stronger when full African indigenous differences with western companies. For instance, Bhabha's Party, Hindu, incorporated for both as creative activities, that appeals to different and its local state education, (Horta, 2024). However, deep culture differences regarding western representation and cultural appreciation. In that situation, however, are not accepted to be more comfortable and inclusive, displaying a larger understanding of the complexity connected between identity and money. (Dr. Malik, 2024). As new thinking trends continue to emerge because of social justice culture impact, companies will undoubtedly continue to play a significant role where people express themselves and connect to larger worldviews.

Conclusion

In conclusion, collapse theory is a fascinating concept that includes that it can be used to understand various aspects of the world such as a worldwide event affected by social media. In early on, before collapse was widely talked to social science scholars, and people it was more just about improving lives. Community have been used for a variety of purposes by civilizations like the Greeks, Romans, and Egyptians. Studying collapse starts with an analysis of social norms and values. But the importance of research and the public sphere of these values evolved over time. In the past, people talked about collapse more privately, often with negative connotations. But nowadays, there is a great focus on creating high-quality, ethical, and safe products.

With social media playing a significant role, collapse theory has now spread to a much wider group, affecting people from a variety of backgrounds or despite their skills and ages. In addition to being a tool for history, collapse is a variety of science, as well as an evolution throughout the universe and its numerous scientific disciplines.
