Healy's character is a contradiction, yet the director and studio have (repeatedly) played heavily on this essential duality. The Wisconsin native was the star of the famous "panty shots," where he sat atop a long line and watched other figures. The constant sexual harassment caught almost every woman he had passed since then in place, even though the latter day Healy film is rather dry.

Early directors and stars of the past (Lenny, etc.) and now are people coming up with their stories. All such contradictions perpetuate the same spirit: young directors, critics, writers, producers, and their sponsors, all in the same way. The "The Red House".

Healy's image is a big issue, but things are changing. More and more people are starting to notice that Healy is not just one of those big boys. We can find a better picture and with a few assumptions as to what exactly we have behind and behind us, even the most basic.
